FEBRUARY 2010

HAVE NOT APPLIED YOUR PRE-EMERGENTS
YET? IT'S NOT TOO LATE!

Pre-emergents should be applied by the end of January for the best possible control. But applications of pre-emergents made in February can give you up to 90% control. So, if you have not done it yet-DO NOT WAIT ANY LONGER!

20-5-10+4% Iron + PRE-M

GET RAZOR PRO AT **\$79.99** FOR A 2 1/2 GALLON JUG WHILE SUPPLIES LAST!

[COMPARE TO THE ACTIVE INGREDIENTS IN ROUND-UP]

W e e d c o n t r o l n o w !

FOR YOUR DORMANT BERMUDA LAWN, WE HAVE WHAT YOU NEED TO CLEAN UP ALL THE GREEN STUFF!

WHETHER IT BE CLUMPGRASS, BROADLEAF WEEDS OR BOTH, WEEDS CAN BE A BIG PROBLEM IN A DORMANT BERMUDA LAWN. YOU CAN SOLVE THIS PROBLEM WITH A CHEMICAL LAWN RENOVATION USING A TANK MIX OF "NEXT DAY" GRASS AND WEED KILLER AND "TRIMEC"®

WHAT IS "NEXT DAY"?

"NEXT DAY" IS A GRASSY WEED KILLER CONTAINING DIQUAT DIBROMIDE. IT IS A CONTACT HERBICIDE AND DOES NOT GO DOWN INTO THE ROOTS LIKE ROUND UP™

WHAT IS "TRIMEC"®?

"TRIMEC"® IS A SELECTIVE SYSTEMIC HERBICIDE THAT ONLY KILLS BROADLEAF WEEDS AND DOES NOT HARM GRASSES. BECAUSE IT IS A SYSTEMIC, BROADLEAF WEEDS WILL TAKE LONGER TO DIE.

IF I MIX THE TWO TOGETHER AS A SPRAY, WHAT WILL IT DO?

THIS TANK MIX WILL KILL ANNUAL WINTER GRASSY WEEDS IN A DORMANT BERMUDA LAWN, WHILE ONLY "TOP BURNING" ANY GREEN BERMUDA LEAVES. ALSO, IT WILL KILL WINTER BROADLEAF WEEDS, ANNUAL AND PERENNIAL.

WHAT THIS TANK MIX WILL NOT DO:

THIS TANK MIX DOES NOT KILL WEED SEEDS. TO PREVENT THE GERMINATION OF SEEDS A PRE-EMERGENT MUST BE APPLIED TO THE AREA. PLEASE ASK FOR MORE INFORMATION ON THIS SUBJECT. THESE CHEMICALS DO NOT STERILIZE OR DAMAGE THE SOIL. SOIL EFFECT IS VERY MINIMAL.

DIRECTIONS:

- *MOW THE LAWN FIRST.
- *FILL A PRESSURE TYPE PUMP-UP SPRAYER WITH THE TANK MIX FOLLOWING THE LABELED RATES. DO NOT ADD ANY DISH SOAP OR OIL. THIS IS NOT NECESSARY DUE TO THE OIL BASE IN TRIMEC®.
- *COVER THE YARD AT A NORMAL PACE IN ONE DIRECTION, THEN GO OVER AGAIN AT THE RIGHT ANGLE TO THE FIRST APPLICATION. THIS ASSURES GOOD COVERAGE OF ALL THE WEEDS.
- *DO NOT "SPOT TREAT"! THERE ARE WEEDS THAT HAVE GERMINATED THAT YOU CANNOT SEE YET SO TREAT THE ENTIRE LAWN!

PLEASE NOTE:

SPRAY THIS MIX ON DORMANT BERMUDA LAWNS ONLY. DIQUATE DIBROMIDE WILL BURN A GROWING BERMUDA LAWN. IT WILL NOT KILL THE BERMUDA BUT IT WILL TAKE SEVERAL DAYS FOR IT TO COME BACK.

THIS MIX DOES NOT WORK WELL ON CLOUDY OR FOGGY DAYS.

DO NOT WATER FOR 24 HOURS AFTER SPRAYING.

NEED A GOOD GLOVE FOR ROSE PRUNING?

These rose gauntlet gloves have been tested for thorn resistance and they win against other leather gauntlet gloves marketed for this use. These gloves are made with soft top grain pigskin leather that has been brushed to a suede finish to give the leather added suppleness. The cuff is elbow length so these long gauntlet gloves protect more of the arm. The hand is custom fit for a woman's hands so the gloves feel great to wear.

Systemic Insect Control

At Gardener's Supply we have sold (and used) this product for several years. Acecap is a systemic implant system. You drill a pattern of holes and implant a little carrier "bullet" into the cambium layer of the tree. The active ingredient is carried throughout the tree by its own vascular system. Acecap® works great for larger trees and there is no spraying! This kills any sucking insects (aphid, lerp psyllid and scale to name a few) and all caterpillars for 18 weeks!
(Not for use on edible fruit and nut trees)

Merit

Imagine - no sucking or chewing insect problem for a whole year! Applications of Merit™ should be made as soon as possible so the insecticide will be in the plant by spring. Merit™ is a systemic that works through the vascular system of the target plant. One application will give you season-long control in most trees, shrubs and plants. Merit now comes labeled for fruit trees, citrus, and veggies. Also, Merit™ does control caterpillars.*

*Controls only the coleoptera caterpillars which spend their adult stage as a beetle.

Dinotefuran

A new active ingredient that compares to Merit in insects controlled, except it will control all caterpillars, both lepidoptera and coleoptera. It also has a quicker uptake into the plant. Not labeled for edible fruits, nuts, or plants.

MINI FARM BOX

How would you like a Farmer's Market in your own backyard? This raised-bed planter utilizes rot-resistant cedar, saves on water, reduces weeds, and allows you to grow your own vegetables with ease in your own yard.

\$139.99

(suggested retail price: \$159)

With the purchase of your Mini-Farm Box receive \$1 off each bag of Soil Booster used to fill the box. It will take eleven 1 1/2 cubic ft bags to fill the Mini Farm Box.

(See the special insert for more information and start or improve your garden now!)

New News on Pesticides

Merit- a systemic insecticide, now comes with a label for application on fruits, citrus, and vegetables! This product controls aphids, white fly, scale, and leafminers all season long.

Monterey Star Thistle Killer- is labeled for selective control of broadleaf weeds, especially thistles, in pastures. No grazing restrictions!

For Post-Emergent Control of Crabgrass, MSMA- has been the best. It is the active ingredient in Weed Hoe and the Target 6 Plus. It will no longer be available after this year. If you want to stock up we have limited quantities on hand. The replacement for MSMA is quinclorac and it is not as effective.

"Meta-Active" is a new class of insecticide. It has a "Reduced Risk Pesticide" ruling from the E.P.A. It is totally inert until ingested by an insect, then it is changed chemically to be toxic to the insect. The one we have is a Fire Ant Killer, active ingredient "Indoxacarb".

Greenlight Grub Control has a new active ingredient that will control grubs at ALL stages of growth, not just the young ones. Apply starting in April or anytime during the summer.

There are several new organic products with **Neem Oil** or natural insecticides. One of these also controls mites as well as fungus disease on plants and shrubs.
